

WordPress Security

1. Always use the **latest version** of WordPress and keep all plugins up to date.
2. Use only **strong passwords** (min. 10 random characters including special ones).
3. **Limit login attempts** using a plugin or a WAF.
3. Install a security plugin or a WAF (Web Application Firewall). Exemple: **WordFence**.
4. Add **2-step verification** (using a security plugin).
5. Protect [wp-admin](#) directory (source IP access or username and passwords).
6. **Make backups** regularly and test them.
